

There are two different ways to link pages and menus to one another. One is selected through the page itself, while the other is added through the menu settings. There are also custom menus you can enable when you prefer to use dropdown menus and your standard theme doesn't support them..

OPTION 1 - MENU LINKS CREATED THROUGH THE PAGE

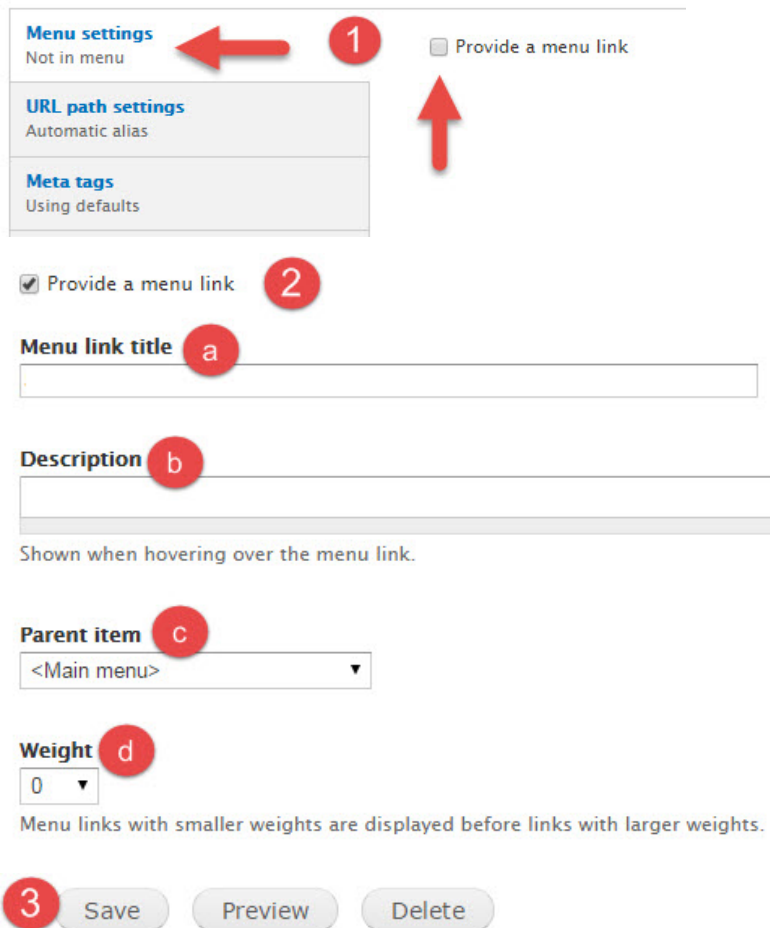

New Node:

Existing Node:

NOTE: If you are creating a new node, create the content for it first and then begin with step one below.

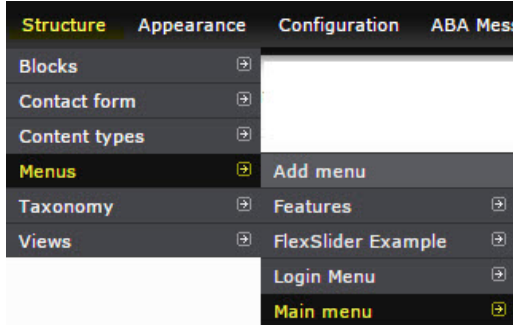

A screenshot of the 'Menu settings' form in Drupal. The form is divided into several sections: 'Menu settings', 'URL path settings', and 'Meta tags'. The 'Menu settings' section has a checkbox labeled 'Provide a menu link' which is checked. A red arrow points to this checkbox, and a red circle with the number '1' is next to it. Below this, there is a text input field for 'Menu link title' with a red circle 'a' next to it. Below that is a text area for 'Description' with a red circle 'b' next to it. Below that is a dropdown menu for 'Parent item' with the value '<Main menu>' and a red circle 'c' next to it. Below that is a dropdown menu for 'Weight' with the value '0' and a red circle 'd' next to it. At the bottom, there are three buttons: 'Save', 'Preview', and 'Delete'. A red circle with the number '3' is next to the 'Save' button.

Your link should now be placed in the menu you selected.

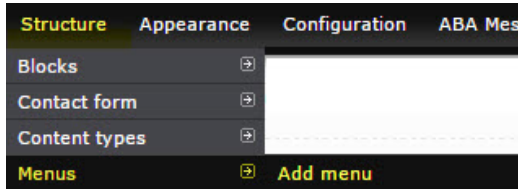

OPTION 2 - MENU LINKS CREATED THROUGH MENU SETTINGS

Before you begin adding the link to your menu you need to know the path of the page. To retrieve this, navigate to the page you want to add a link for and take note of the portion of the address after ".com/". Example: For <http://yoursite.com/store-products> the path of the page is store-products.

Existing Menu:

New Menu:

NOTE: If you are creating a new menu, you will have to enter a Menu Title before proceeding with step one below.

+ Add link **1**

2

Menu link title * **a**

The text to be used for this link in the menu.

Path * **b**

The path for this menu link. This can be an internal link or an external URL. To enter a path that is not a full URL, enter "<separator>" to generate separator item.

Description **c**

Shown when hovering over the menu link.

Enabled **3**

Menu links that are not enabled will not be listed

Show as expanded

If selected and this menu link has children, the menu will be expanded

Parent link **4**

The maximum depth for a link and all its children is

Weight **5**

Optional. In the menu, the heavier links will sink and the lighter links will float

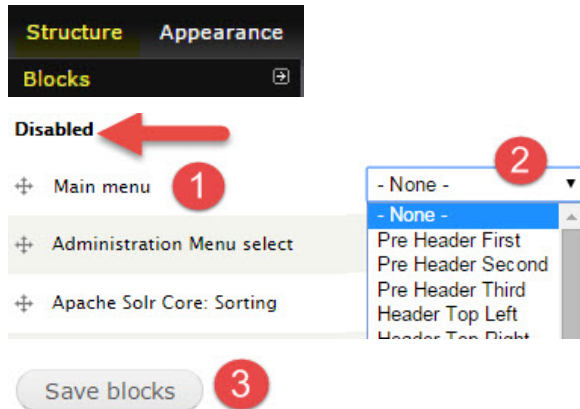

Save **6**

NOTES:

- You can also use the 'Four Pointed Arrow' to drag and drop links into the order you would prefer they appear.
- If you are adding a link to an outside page, you would use the entire page URL instead of just the path.

DISPLAYING YOUR MENU

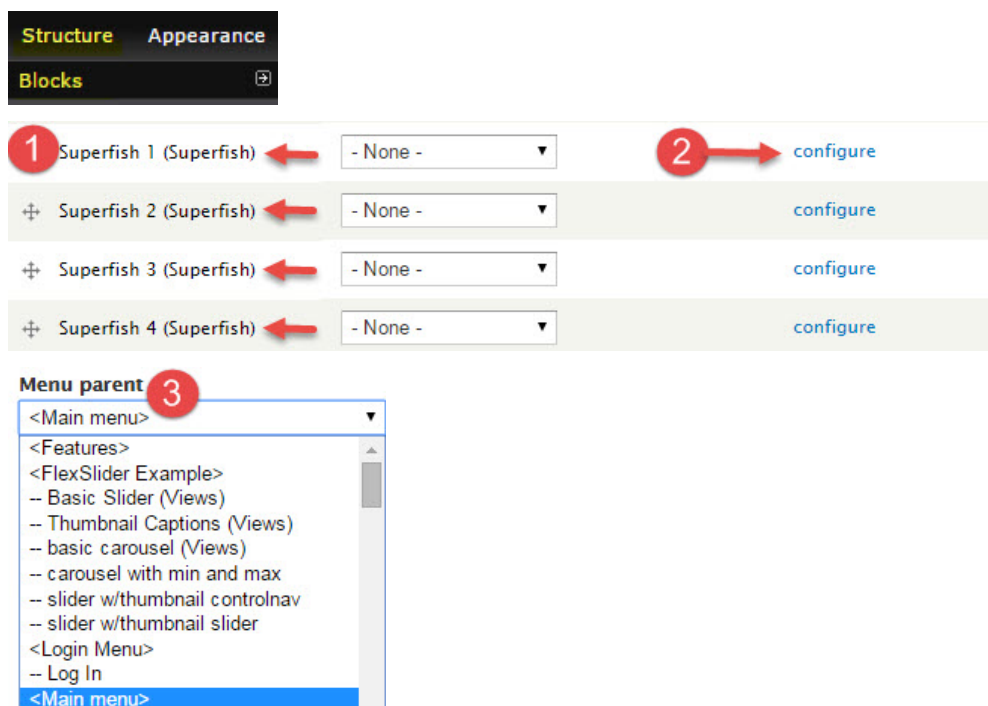

If this a new menu and not one already displayed on your site you will need to display the menu.

CUSTOM MENU MODULES

In some cases, the menu options for your theme may not fit your needs, such as a theme that doesn't support drop down menus. In those cases, we can offer a few custom menu modules such as Superfish/Suckerfish or Nice menus, depending upon the allowances of your theme. These menus are enabled on a request basis so if you have not done so already, email staff@bookweb.org to request the module be enabled for your site.

SUPERFISH/SUCKERFISH MENUS

▼ SUPERFISH SETTINGS **4**
